From tests using a model ball mill, especially test measurements of deciding friction-and lift operating members, it was found that the grinding law formulated in 1867 by Rittinger for calculating the mechanical energy absorption, based on the weight of the grinding media, is not valid. For brittle material, it was shown that energy absorption varies with the square of the specific surface of the grinding medium. (Author) (Machinery--Manufacturing, TT, v. 9, no. 5)
